
Overview

This standard is about the visual inspection of mammography images to identify areas of possible abnormality. This inspection, and all other relevant information that may be available, will be used by the practitioner to make a decision whether to recall the individual for further investigations. This standard applies to the interpretation of radiographic images obtained of the breast as part of a regular screening or symptomatic programme. Users of this standard will need

sfhm3

Review mammography images for the presence of abnormalities and make recommendations for further action
